

CONTENTS OF VOLUME 276

Number 1, January 1990

COMMUNICATION

- Expression of the Yeast *LEU4* Gene Is Subject to Four Different Modes of Control
Mary H. Peters, James P. Beltzer, and Gunter B. Kohlhaw 294

BIOLOGICAL OXIDATIONS, BIOENERGETICS, AND P450 REACTIONS

- Bile Acids: Antioxidants or Enhancers of Peroxidation Depending on Lipid Concentration
Robert J. DeLange and Alexander N. Glazer 19
- Oxygenation of Fluorinated Tyrosines by Mushroom Tyrosinase Releases Fluoride Ion
Robert S. Phillips, Joel G. Fletcher, Robert L. Von Tersch, and Kenneth L. Kirk 65
- L-Carnitine Delays the Killing of Cultured Hepatocytes by 1-Methyl-4-phenyl-1,2,3,6-tetrahydropyridine
Jack W. Snyder, Marlene E. Kyle, and Thomas N. Ferraro 132
- Superoxide-Dependent and Superoxide-Independent Pathways for Reduction of Nitroblue Tetrazolium in Isolated Rat Cardiac Myocytes
William S. Thayer 139
- Respiratory Control and ADP:O Coupling Ratios of Isolated Chick Heart Mitochondria
Peter P. Toth, Kendall J. Sumerix, Shelagh Ferguson-Miller, and Clarence H. Suelter 199
- Cellular Recovery of Glyceraldehyde-3-phosphate Dehydrogenase Activity and Thiol Status after Exposure to Hydroperoxides
Ann E. Brodie and Donald J. Reed 212
- Monoterpene Biosynthesis: Specificity of the Hydroxylations of (–)-Limonene by Enzyme Preparations from Peppermint (*Mentha piperita*), Spearmint (*Mentha spicata*), and Perilla (*Perilla frutescens*) Leaves
Frank Karp, Charles A. Mihaliak, Jeffrey L. Harris, and Rodney Croteau 219
- The Effects of Caffeic Acid and Its Related Catechols on Hydroxyl Radical Formation by 3-Hydroxyanthranilic Acid, Ferric Chloride, and Hydrogen Peroxide
Hideo Iwahashi, Toshihiro Ishii, Ryojin Sugata, and Ryo Kido 242
- Superoxide Dismutases Enhance the Rate of Autoxidation of 3-Hydroxyanthranilic Acid
Toshihiro Ishii, Hideo Iwahashi, Ryojin Sugata, Ryo Kido, and Irwin Fridovich 248

ENZYME MECHANISMS AND METABOLIC REGULATION

- Scorbutic and Fasted Guinea Pig Sera Contain an Insulin-like Growth Factor I-Reversible Inhibitor of Proteoglycan and Collagen Synthesis in Chick Embryo Chondrocytes and Adult Human Skin Fibroblasts
Ikuko Oyamada, Jerzy Palka, Elaine M. Schalk, Koji Takeda, and Beverly Peterkofsky 85
- ADP and Glucose as Possible Synergistic Partners in the Stimulation of Liver Glycogen Synthase Activation
Daniel P. Gilboe 109
- Comparison of the Properties of the Protein Phosphatases from Avian and Mammalian Smooth Muscles: Purification and Characterization of Rabbit Uterine Smooth Muscle Phosphatases
Mary D. Pato and Ewa Kerc 116
- Modes of Inhibitory Action of 4 β -Phorbol 12-Myristate 13-Acetate in Thrombin-Stimulated Arachidonic Acid Release in Intact and Permeabilized Platelets
Toshihiko Murayama, Yasuo Kajiyama, Akemi Takahashi, and Yasuyuki Nomura 146
- Stimulation of Human Erythrocyte 2,3-Bisphosphoglycerate Phosphatase by Vanadate
George L. Mendz, Serena J. Hyslop, and Philip W. Kuchel 160
- Kinetic Evidence of the Existence of a Regulatory Phosphoenolpyruvate Binding Site in Maize Leaf Phosphoenolpyruvate Carboxylase
Rogelio Rodríguez-Sotres and Rosario A. Muñoz-Clares 180

- The Mechanism of Succinate or Fumarate Transfer in the Tricarboxylic Acid Cycle Allows Molecular Rotation of the Intermediate
Sidney A. Bernhard and Peter Tompa 191
- Studies of Protein-Protein Interaction Using Countercurrent Distribution in Aqueous Two-Phase Systems: Partition Behavior of Five Glycolytic Enzymes from Crude Baker's Yeast Extract
Lars-Olof Persson and Göte Johansson 227
- Insulin-like Effects of ATP on Adipocyte Pyruvate Dehydrogenase and Phosphorylase
Kang Cheng and Eugene G. Herold 232
- Induction of the Enzyme Aldose Reductase in a Lens Epithelial Cell Line from a Transgenic Mouse
Paul Russell, Takahiko Yamada, and Lorenzo O. Merola 259

GENETIC STRUCTURE AND FUNCTION

- Immunoblot Analysis of the Structure of Protein Synthesis Initiation Factor eIF3 from HeLa Cells
Susan C. Milburn, Roger F. Duncan, and John W. B. Hershey 6

GLYCOPROTEINS, GLYCOLIPIDS, AND EXTRACELLULAR MATRICES

- Deletion of Carboxy-Terminal Residues of Murine Granulocyte-Macrophage Colony-Stimulating Factor Results in a Loss of Biologic Activity and Altered Glycosylation
Celia C. LaBranche, Steven C. Clark, G. Douglas Johnson, David Ornstein, Daniel E. Sabath, Robert Tushinski, Verner Paetkau, and Michael B. Prystowsky 153

LIPIDS AND LIPID MEDIATORS

- Role of Polyunsaturated Fatty Acids and Lipid Peroxidation in LM Fibroblast Plasma Membrane Transbilayer Structure
Friedhelm Schroeder, Ann B. Kier, and William D. Sweet 55
- Persistent Activation of Platelet Membrane Phospholipase C by Proteolytic Action of Trypsin and Thrombin
Eduardo R. Lazarowski and Eduardo G. Lapetina 265

MEMBRANE RECEPTORS, TRANSPORT, AND INTRACELLULAR SIGNALS

- Two-Dimensional Probability Density Analysis of Single Channel Currents from Reconstituted Acetylcholine Receptors and Sodium Channels
Bernhard U. Keller, Myrta S. Montal, Robert P. Hartshorne, and Mauricio Montal 47
- Lactate Transport and Glycolytic Activity in the Freshly Isolated Rabbit Cornea
Chung-Ho Chen and Sumi C. Chen 70
- A Rapid Redistribution of the Transferrin Receptor to the Cell Surface of HL-60 Cells and K562 Cells upon Treatment with Dimethyl Sulfoxide Due to Slowing of Endocytosis
Deborah J. Vestal, Bruce H. Davis, and Caroline A. Enns 278

PLANT MOLECULAR BIOLOGY, BIOCHEMISTRY, AND PHOTOSYNTHESIS

- Tryptophan Fluorescence Studies of Ferredoxin:NADP Reductase Indicate the Presence of Tryptophan in or near the Ferredoxin Binding Site
Dan J. Davis 1
- Concentrations of Long-Chain Acyl-Acyl Carrier Proteins during Fatty Acid Synthesis by Chloroplasts Isolated from Pea (*Pisum sativum*), Safflower (*Carthamus tinctoris*), and Amaranthus (*Amaranthus lividus*) Leaves
Grattan Roughan and Ikuo Nishida 38
- Application of an Efficient Strategy with a Phage λ Vector for Constructing a Physical Map of the Amyloplast Genome of Sycamore (*Acer pseudoplatanus*)
Jarunya Ngernprasirtsiri and Hirokazu Kobayashi 172
- Characterization of a Ferredoxin:NADP⁺ Oxidoreductase from a Nonphotosynthetic Plant Tissue
Masakazu Hirasawa, Kai-Tai Chang, and David B. Knaff 251
- Regulation of Expression of the Casbene Synthetase Gene during Elicitation of Castor Bean Seedlings with Pectic Fragments
Augusto F. Lois and C. A. West 270

PROTEASES, PROTEIN TURNOVER, AND POST-TRANSLATIONAL PROCESSING

- Interactions of Human Mast Cell Trypsin with Biological Protease Inhibitors
Stephen C. Alter, Johannes A. Kramps, Aaron Janoff, and Lawrence B. Schwartz 26
- Aging and Cellular Maturation Cause Changes in Ubiquitin-Eye Lens Protein Conjugates
Jessica H. Jahngen, Ruth D. Lipman, Donald A. Eisenhauer, Edwin G. E. Jahngen, Jr., and Allen Taylor 32
- Ammonium Chloride Inhibits Basal Degradation of Newly Synthesized Collagen in Human Fetal Lung Fibroblasts
Frank A. Barile, Dorothy E. Guzowski, Catherine Ripley, Zafar-e-Alam Siddiqi, and Robert S. Bienkowski 125

PROTEIN STRUCTURE AND FUNCTION

- The Interaction of Calmodulin with the C-Terminal M5 Peptide of Myosin Light Chain Kinase
Louise Garone and Robert F. Steiner 12
- Identification of Different Classes of Nonessential Sulfhydryl Groups in *Escherichia coli* Adenylosuccinate Synthetase
Qun Dong, Chandrasen Soans, Feng Liu, and Herbert J. Fromm 77
- Formation of Cyclic Imide-like Structures upon the Treatment of Calmodulin and a Calmodulin Peptide with Heat
Bruce L. Martin, Danlin Wu, Louisa Tabatabai, and Donald J. Graves 94
- Kinetic Analysis of the Separate Phosphorylation Events in the Phosphorylase Kinase Reaction
William R. Harris and Donald J. Graves 102
- Distance Measurements in Cardiac Troponin C
Chih-Lueh Albert Wang and Paul C. Leavis 236
- Tetrameric Structure of Mitochondrially Bound Rat Brain Hexokinase: A Crosslinking Study
Guochun Xie and John E. Wilson 285

Number 2, February 1, 1990

BIOLOGICAL OXIDATIONS, BIOENERGETICS, AND P450 REACTIONS

- Evidence for the Presence of Distinct Flavin-Containing Monooxygenases in Human Tissues
Antoinette Lemoine, Marc Johann, and Thierry Cresteil 336
- Characterization of Reactions Catalyzed by Manganese Peroxidase from *Phanerochaete chrysosporium*
Michael D. Aitken and Robert L. Irvine 405
- Characterization of the Ah Receptor Mediating Aryl Hydrocarbon Hydroxylase Induction in the Human Liver Cell Line Hep G2
Eve A. Roberts, Kathene C. Johnson, Patricia A. Harper, and Allan B. Okey 442
- Characterization of Three Cytochrome P450s Purified from Renal Microsomes of Untreated Male Rats and Comparison with Human Renal Cytochrome P450
Susumu Imaoka, Kazuo Nagashima, and Yoshihiko Funae 473
- Enhanced Decomposition of Oxyferrous Cytochrome P450_{CIA1} (P450_{cam}) by the Chemopreventive Agent 3-t-Butyl-4-hydroxyanisole
Stephen D. Gettings, Colleen B. Brewer, William M. Pierce, Jr., Julian A. Peterson, A. David Rodrigues, and Russell A. Prough 500

ENZYME MECHANISMS AND METABOLIC REGULATION

- Studies on the Subsite Specificity of the Rat Brain Puromycin-Sensitive Aminopeptidase
Gary D. Johnson and Louis B. Hersh 305
- Kinetic Study of Nucleophile Specificity in Dipeptide Synthesis Catalyzed by Clostridiopeptidase B
G. Fortier and J. Gagnon 317
- Bioactivation Mechanism of Cytotoxic Homocysteine S-Conjugates
Lawrence H. Lash, Adnan A. Elfarrar, Donna Rakiewicz-Nemeth, and M. W. Anders 322
- Role of the *entC* Gene in Enterobactin and Menaquinone Biosynthesis in *Escherichia coli*
Annette Kaiser and Eckhard Leistner 331

Archives of Biochemistry and Biophysics is an international journal dedicated to the dissemination of fundamental knowledge in all areas of biochemistry and biophysics. **Short Communications** and **regular manuscripts** that contain new and significant information of general interest to workers in these fields are welcome. Sufficient detail must be included to enable others to repeat the work.

Short Communications offer a means of early publication of work of such importance that rapid publication is warranted. They should not exceed 15 double-spaced typed manuscript pages in length (including text, bibliography, tables, and figures). To expedite review and processing of communications, authors may send them directly to an Executive Editor most closely associated with the subject category of the communication. Communications sent to the Editorial Offices of the journal (see below) will be assigned to an Executive Editor.

Manuscripts should be written in clear, concise, and grammatical English and should be submitted in quadruplicate (one original and three photocopies), including four sets of original figures or good quality glossy prints, to:

Archives of Biochemistry and Biophysics

Editorial Office
Seventh Floor
1250 Sixth Avenue
San Diego, California 92101

Failure to receive the required number of copies of the manuscript may delay review. All copies of halftone artwork *must* be glossy prints or originals; photocopies of halftones do not show sufficient detail to be used for the review process. *In the case of rejected manuscripts only one copy of the manuscript will be returned to the author.*

Gene sequences should be simultaneously submitted to a gene databank. Authors of papers describing new structure determinations are requested to submit to the Protein Data Bank all of the structural data required to validate the discussion, including both x-ray amplitudes and phases and the advised atomic coordinates.

Original papers only will be considered. ***Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all***

of the authors and by the institution where the work was carried out. It is the responsibility of the corresponding author to obtain the agreement of all the co-authors of the manuscript prior to its submission to the journal. Abstracts of oral or poster presentations are not considered to constitute previous publication. Presentation of material in preliminary communications normally will not preclude publication of a full paper in *Archives*, provided that the full paper contains additional information that justifies its publication and does not repeat the presentation of the same data that supported the preliminary communication. The manuscript should be accompanied by copies of all preliminary communications and of all relevant manuscripts that are in press or under editorial consideration by another journal. Authors must verify the wording of any cited personal communication with the persons who supplied the information and obtain approval for the use of their names in connection with the quoted information or for the citation of unpublished work; written evidence of such approval should accompany the manuscript. All material published in *Archives* represents the opinions of the authors and should not be construed to reflect the opinions of the Editors or the Publisher.

Authors should suggest competent reviewers in their field and may also suggest individuals whom they wish to have excluded from the review process. The corresponding author will receive a decision letter from the Executive Editor. Revised manuscripts and correspondence concerning such manuscripts should be sent to the Executive Editor at the address indicated on the decision letter. Revised manuscripts should be accompanied by a copy of the unrevised version.

Many acceptable papers require minor revision or condensation. It is in the mutual interest of both the authors and the journal that amended manuscripts be returned promptly. A revised paper will retain its original date of receipt only if it is received by the Executive Editor within 2 months of the date of return to the author.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Form of manuscript. Manuscripts should be typewritten and double-spaced throughout on one side of 8.5 × 11-in. white paper, with 1-in. margins on all sides. All pages should be numbered consecutively.

Subject Areas. Authors should specify on page 1 of the manuscript the Subject Area of the article submitted:

Biological Oxidations, Bioenergetics, and P450 Reactions
Enzyme Mechanisms and Metabolic Regulation

¹ An extended Instructions to Authors is published in the January issue of *Archives of Biochemistry and Biophysics*. Reprints are available from the Editorial Office upon request. Authors should consult the extended Instructions for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

Archives of Biochemistry and Biophysics is an international journal dedicated to the dissemination of fundamental knowledge in all areas of biochemistry and biophysics. **Short Communications** and **regular manuscripts** that contain new and significant information of general interest to workers in these fields are welcome. Authors should consult the extended Instructions for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

Genetic Structure and Function
Glycoproteins, Glycolipids, and Extracellular Matrices
Lipids and Lipid Mediators
Membrane Receptors, Transport, and Intracellular Signals

Physical Biochemistry

Plant Molecular Biology, Biochemistry and Photosynthesis

Proteases, Protein Turnover, and Post-translational Processing

Protein Structure and Function

Page 1 should contain the article title, author(s), affiliation(s), a short running title (abbreviated form of title) of less than 65 characters including letters and spaces, the appropriate subject category for listing in the Table of Contents, suggestions for index list entries, and the name and complete mailing address (and telephone number if possible) of the person to whom correspondence should be sent.

Page 2 should contain a short abstract of 50–250 words.

Editorial style should conform to the *Handbook for Authors* (American Chemical Society).

Footnotes to the text should be identified by superscript Arabic numerals and should be typed double-spaced on a separate sheet: footnotes to tables should be identified by superscript lowercase italic letters (^{a,b}, etc.) and placed at the bottom of the table.

Tables should be numbered with Roman numerals and cited consecutively in the text. Each table should be titled and typed double-spaced on a separate sheet. Units must be clearly indicated for each of the entries in the table.

Authors can submit complex tables and mathematical material as camera-ready copy. In this way, they are spared multiple, tedious proofreadings and the chance of error is reduced. Tables submitted as camera-ready copy should be typed single-spaced whenever possible and preferably submitted as 5 × 7-in. glossy prints.

Figures should be cited consecutively in the text by Arabic numerals. Legends should be typed double-spaced on a separate sheet. All figures and illustrations are to be submitted in such form as to permit photographic reproduction without retouching or redrawing. They should be planned to fit the proportion of the printed page (7½ × 9 in.; column width, 3.5 in.) and submitted no larger than 8.5 × 11 in. Lettering on drawings should be of professional quality or generated by

high-resolution computer graphics and should be large enough (10–12 points) to take a reduction of 50–60%. Drawings should be made with black India ink on tracing linen, smooth-surface white paper, or Bristol board. Alternatively, high-quality computer graphics may be acceptable. Graph paper, if used, should be ruled in blue. Glossy prints of figures properly prepared are acceptable. Illustrations in color can be accepted only if the authors defray the cost.

References should be cited in the text by an Arabic numeral in parentheses and listed at the end of the paper in numerical order typed double-spaced on a separate sheet. Abbreviations of journal titles should conform to those of *Chemical Abstracts Service Source Index*, 1985. Please note the following examples.

1. Webster, K. D., and Anders, M. W. (1989) *Arch. Biochem. Biophys.* **273**, 562–571.
2. Stein, W. D. (1986) *Transport and Diffusion across Cell Membranes*, Academic Press, San Diego.
3. Magnani, J. L., Spitalnik, S. L., and Ginsburg, V. (1987) in *Methods in Enzymology* (Ginsburg, V., Ed.), Vol. 138, pp. 195–207, Academic Press, San Diego.

Miniprint supplements are an effective way of presenting supportive data. They are printed from plates made by photographic reduction from typed pages provided by the author. Types of data that have been published as miniprint supplements include analyses relevant to studies of amino acid or polynucleotide sequences, details of chemical syntheses, preparation of enzymes, extended statistical or mathematical discussions, and X-ray diffraction data. The miniprint supplement is published in the journal, immediately following the parent paper, and is included in the reprints. Since the miniprint supplement is produced from camera-ready copy supplied by the authors with no redaction or editorial changes it is important that the copy be letter perfect and conform to the style of the journal. *Authors will not be permitted to make changes to the miniprint supplement at the proof stage. Any changes necessary in the proof must be made as a typeset "Note added in proof."*

Proofs will be sent to the author, with a reprint order form. Authors will be charged for extensive alterations.

Reprints. Fifty reprints of each article will be provided free of charge. Additional reprints may be purchased.
